PROFILE

Results-oriented Having worked as a PHP and Laravel developer for more than two and a half years, I have designed, developed, and optimized scalable online applications. competent in integrating third-party services, creating admin dashboards, putting authentication and permission mechanisms in place, and creating reliable APIs. adept at managing databases (MySQL) and dealing with contemporary frameworks (Laravel, React, and Vue). devoted to providing solutions that are user-focused, safe, and of the highest caliber.

WORK EXPERIENCE

ADMK Solution — Islamabad
Laravel & Vue.js Developer
DEC 2024 - PRESENT

At ADMK Software House, I develop and maintain multi-tenant SaaS applications using Laravel, Vue.js, Inertia.js and optimize Databases, and integrate RESTful APIs with dynamic SPAs. I ensure secure role-based access, streamline deployments with CI/CD, and collaborate with teams to deliver scalable, high-performance solutions.

Eziline Software House — Rawalpindi
Laravel Developer
APIRL 2023 - AUG 2024

At Eziline Software House, I build and deploy secure, scalable Laravel applications, integrate RESTful APIs with modern frontends, optimize MySQL databases for performance, and implement robust authentication systems to ensure reliable and high-quality software delivery

XCL Technologies — Hyderabad
Laravel Developer Intern
SEP 2022 - NOV 2022

Contributed to Laravel projects by assisting in feature development and bug fixes, applying Git for collaborative version control, and following Laravel coding standards to support a maintainable codebase.

PROJECTS

ONLINECHANNEL.IO
A DIGITAL CONTENT MANAGEMENT AND STREAMING PLATFORM

- Designed and developed a multi-tenant React and Laravel-based system to handle multiple clients on a single platform.
- Built a customized content upload & scheduling module for seamless video and media publishing.
- Integrated payment gateway and subscription management for premium content.
- Optimized database queries and caching strategies to ensure scalability and performance under high traffic.

EVENT CENTRAL
AN EVENT MANAGEMENT AND TICKETING SYSTEM

- Developed event creation and management dashboards with role-based access for organizers.
- Implemented secure ticket booking, QR code generation, and attendee tracking features.
- Integrated real-time notifications and email reminders for event updates.
- Enhanced user experience by building filtering & search modules for events by category, location, and status.

AUCTION BIDDING
REAL-TIME AUCTION SYSTEM

- Developed real-time bidding functionality using Laravel and AJAX.
- Designed admin dashboards to manage auctions, bids, and participants.
- Implemented authentication and role-based access control for users and admins.
- Ensured transaction integrity and security through robust backend validation.

CARSWAP
ONLINE CAR TRADING AND MARKETPLACE PLATFORM

- Built buyer-seller interaction features including secure authentication and listing management.
- Developed RESTful APIs to support mobile and web integrations.
- Implemented advanced search and filtering for cars based on price, model, and year.
- Collaborated with UI/UX team to deliver a responsive and user-friendly design.
